**Date:** 06/29/2011 10:44 AM

---

We're live in production:

<http://www.epa.gov/geospatial/ermaps/losalamosfire/>

Access code: (b) (6)

Are we expecting the same kind of daily data updates as the MSFloods site?

**Subject:** Re: R6 EOC Flex Viewer v1 code/mxd/msd/data uploaded SW & Orator-S FTP

---

Flex Viewer v1 code/data/mxd/msd is uploaded to sidewinder at the following path:  
 /Incidents/LosAlamosFire2011/Region6/RRC/Services/Web\_Services/LosAlamosSFV\_v1

Same folders are uploaded to Orator-S FTP as well at the following path:  
 orator-s.epa.gov/Orator-s/LosAlamos\_R6/LosAlamosSFV\_v1

Let me know if there are any problems or questions; hopefully we got the small kinks worked out during the MS River Flood response.

Sure, no problem. If Brett can upload the code, data and maps to the Orator staging server, Qi and I can get it deployed. Will this also need to be password protected in production? I will be out this Thursday and Friday, so please be sure to cc Qi on all communications, he taught me everything I know and is my backup POC on Orator.

Here's the updated Flex. It's also ready to be uploaded to Orator when instructed.

Gents-

Attached are the rough flight lines for ASPECT of the Area G and Waste Storage areas. These will be modified and manipulated with more accurate coordinates as the time arrives, but these will suffice to get things started. We can mobilize in Santa Fe by mid-day tomorrow, 29 June (we are calibrating at the Grand Junction pads in the morning). Please let us know what schedule works best for you. Our flight will collect radiation, chemical and if possible imagery. Also, the infrared line scanner will be able to identify the front of the fire. If the situation

changes rapidly for the bad while the plane is in the air, we are preparing to process data on the aircraft and ship it directly to the ground for a faster turn around on the situational awareness

Please contact Mark (513-675-4753) if you have any questions or concerns
